From the Editor's Desk....

Dr. Prashant Chandra Das
Editor OJS,
ASI Odisha State Chapter

The waxing and waning of the covid 19 pandemic has done a lot by teaching us resilience, opening up new avenues of functioning and taught us new ways of healthcare that have been least traversed. ASI - odisha, in its quest for excellence, has initiated public awareness initiatives and started weekly virtual academic programmes in the form of C.M.E in which eminent national speakers talk about relevant topics. From this news letter onwards, we have incorporated a section for educative articles. I wish to extend my sincere thanks to all contributors. Long live ASI- Odisha

Chairman's Message

Dr. Bikash Ranjan Hota
Chairman,
ASI Odisha State Chapter

I am glad to learn that ASI, Odisha chapter is going to publish the 2nd news letter of the year 2020-21. This no doubt, will give an opportunity to all our surgeons to refresh, update and enhance their overall knowledge and surgical skill as well.

This will not create academic awareness but also long term fellowship amongst surgeons of Odisha. I Extend my warm greetings to the editor, contributors and organizers of the Newsletter. I wish the endeavour all success.

Spectrum of Primary Hyper ParaThyroidism

Dr. Arun Kumar Mohanty
Associate Professor,
Dept. of Endocrine Surgery
SCMCH, Cuttack

Primary Hyper Parathyroidism (PHPT) is characterized by hypercalcemia due to autonomous production of Parathyroid Hormone (PTH). When we consider the symptomatology there is a striking difference between, we Indians & the people of Western countries. In Western countries, diagnosis is made in early phase of disease because of routine biochemical screening but in India, we get cases almost in florid symptomatic state as its almost a late presentation.

PHPT is presented with overtly symptomatic disease of bones, stones and groans. Over a period of 8 years (2010-2018) we have encountered 33 cases of PHPTs with female preponderance.

Spectrum of presentation

Skeletal	18
Nephrocalcinosis	4
Pancreatitis	2
Neuro muscular	3
Skeletal + kidney	6

Comparison b/w India & Western nations

	India	Western
Countries		
Bone	77 %	5 %
Renal	36 %	15%
Pancreatitis	15 %	1%
Muscular	54 %	ND
Asymptomatic	5 %	> 80 %

Skeletal Survey

Tuftening of Phalynx Salt

Pepper Appearance of skull

Brown Tumors

Pathological Fractures

Cause of Primary Hyperparathyroidism

- Single adenoma-MC
- Multiple adenomas
- Nodular hyperplasia
- Carcinoma- Parathyroid

Diagnosis pf PHPT is mainly based upon imaging like high resolution ultrasonography of neck, MIBI Scan 4D CT and biochemical markers like Serum Calcium & Serum intact PT hormone (iPTH).

Management of PHPT is mostly surgical

Focused Parathyroidectomy

Parathyroid Adenoma

Success of parathyroid surgery is evaluated by estimating PTH just after excision or 10mts after excision. Immediate post operative period hypocalcemia is taken care by calcium infusion to avoid hungry bone syndrome. Incidence of hungry bone syndrome is more in our settings might be due to associated vit D3 deficiency.

ASI Odisha has initiated a weekly CME , held every Friday evening 8 P.M to 9 P.M .

ASI
Association of Surgeons of India,
Odisha State Chapter
